Thor

PS10

\$ 1499.00

Manufacturer's Site: www.thortechnologies.com.au/ps10p

Voltage Calibration : Yes
Power Filtering : Yes
Voltage Indicator LEDs : Yes
Surge Protection : Yes
Data/Aerial Protection : Yes

The Thor PS10 is the best and most comprehensive power conditioning facility we could find for the money. Every system will benefit in performance and protection by having one of these.

The Thor PS10 Smart Station has a lot to it. It is a microprocessor controlled power conditioning device which achieves better power supplies to your equipment and provides protection from harmful surges or spikes. Firstly, and most visibly, it gives you a pair of readouts showing the incoming mains voltage and the outgoing (adjusted) voltage. It will maintain your output voltage to within 1% or to within 3% (selectable) while also applying filters to the incoming waveform to clean it of unwanted noise and spikes.

The front window also has visible warnings to show you such things as when the mains power has become (i) irregular in waveform (ii) overvoltage (iii) brownout conditions, and (iv) overloaded output (current) . The "soft start" circuit allows the demand to be ramped up.

The companion Smart Board (8 way) doubles the protection from harmful voltage surges or spikes while providing a handy power board facility for eight plugs and protection for data & antenna cables. There are three isolated banks on the Smart Board, ensuring that there is no "crosstalk" or interference between components connected.
