Mr Roy Stokes
Thor Technologies Pty Ltd
PO Box 2047
WELLINGTON POINT QLD 4160

Dear Mr Stokes

“Thor Technologies” POWER STATION MODEL: PS10

Thank you for bringing this unit to our attention. As per our initial discussions we operate a electrical safety compliance service and maintain a small test laboratory and had issues with the voltage delivered by the local supply. As with many country areas the voltage fluctuation can be a difficult and often an expensive issue to over come when tight tolerances are required.

Our experimental testing of the PS10 has shown that it delivers a stable supply within the stated parameters. The PS10 has solved our issues with voltage fluctuations and provides a very stable power source for our test equipment. We use the 3% scale as we have to adhere to close voltage tolerances for the Australian Standards testing requirements.

To ensure that all socket outlets on the test bench have a stabilised supply, the unit is now “permanently” connected into the test bench. This now provides us with a high level of confidence that the supply voltage is within a 3% tolerance when testing electrical equipment.

Thank you for your excellent service and high quality product that has boosted the confidence in our test results and it was certainly a very reasonably priced solution for our small business.

Yours Sincerely

DES EDE
Manager -Regulatory Compliance and Investigations
